

## Humminbird Directions:

To transfer the information from your new **BOATLANES Sam Rayburn** MMC card to your **Humminbird** GPS Unit: **Begin by inserting the card into your Humminbird Unit.**

Your **Humminbird** GPS Unit makes it very easy to access the BOATLANES Waypoints/Trails. Once you insert the BOATLANES MMC card into your GPS; Wait for it to load (*a few seconds*) and the waypoints/trails should appear clearly marked on your GPS screen. BOATLANES SAM RAYBURN file is: **Matrix Folder ...contains two .ht files and one data file**

**“Unlocking a Pointer”** is the most efficient way to navigate using your GPS because it allows you to point your boat in the direction of the next GPS waypoint and gives you visual reference of your direction.

In order to utilize **COURSE PROJECTION LINE** (*“Unlock a Pointer”*):

- 1) Highlight “Course Projection Line” on the Navigation main menu
- 2) Use the LEFT or RIGHT 4-WAY Cursor Control keys to change the Course Projection Line setting (Hidden, Visible, Default = Visible).

**IMPORTANT NOTE:** Trails marked with **yellow “X”** are *narrow and should be navigated only at IDLE SPEEDS ONLY!* Trails marked with **red “X”** should **NOT BE NAVIGATED AT ALL** when the water levels are **Below FULL POOL.** You can check current lake levels by going to our website:
